COVID-19 pandemic and the need for vaccines

- Administering COVID-19 vaccines at a societal scale is deemed as the most appropriate way to defend against the pandemic
- Only mass adoption of vaccines in a society can lead to herd immunity

Societal vaccination drives are going on ...

Pew Research Center 

Growing Share of Americans Say They
Plan To Get a COVID-19 Vaccine – or
Already Have

However, there is a long-drawn debate on vaccines

Pro-vaxxers

support and promote the benefits of vaccines

Anti-vaxxers

believe that vaccines do more harm than good

Anti-vaxxer movement also gaining momentum ...

It's not for me: speed of COVID-19 vaccine race raises safety concerns

Social media disinformation campaigns tied to vaccine hesitancy

Los Angeles Times

Why is the 'anti-vaxxer' movement growing during a pandemic?

nature

Anti-vaccine movement could undermine efforts to end coronavirus pandemic, researchers warn

Important questions

1. What are the opinions of Anti-Vaxxers and Pro-Vaxxers towards COVID vaccines?
 - *Are the anti-vax opinions about COVID-19 vaccines similar to the traditional anti-vax arguments that were prevalent in pre-COVID times?*
2. Has the vaccine-related stance of some users changed over time due to the pandemic?
 - *If so, what factors could have caused this change in stance?*

Our research

1. Attempts to answer these questions using automated analyses over social media (Twitter) data
2. Conducts a long-term (over 3 years) analysis of people's attitudes towards vaccines, both individually and collectively
3. Shows for the first time, that some people have changed their vaccine-stance (e.g., from Pro to Anti or vice-versa) during the pandemic
4. Analyses potential reasons behind such changes in vaccine-stance

➤ **Data collection**

➤ Identifying vaccine-stance

➤ How the vaccine discourse has changed

➤ How users' vaccine-stance has changed

➤ Implications

Data Collection

- Rely on social media (Twitter)
- Decided to collect Twitter data since 2018, to study long-term dynamics of vaccine stances both before and during COVID-19
- Official Twitter API only allows data from past 7-10 days.
- Thus, used the **Twint Library*** to collect vaccine-related English tweets from different time periods

*<https://github.com/twintproject/twint>

Data Collection - time periods

1. “**Pre-COVID**” period:
 - *Jan 2018 - Dec 2019*
 2. “**COVID**” period:
 - *January-December 2020*
 3. “**COVID-vax**” period:
 - *January-March 2021*
- 

Data Collection - queries used

1. **“Pre-COVID”** period:
 - *Jan 2018 - Dec 2019*

2. **“COVID”** period:
 - *January-December 2020*

3. **“COVID-vax”** period:
 - *January-March 2021*

- ❖ *Pro-Vax Hashtags**
 - *#VaccinesSaveLives, #GetVaccinated*

- ❖ *Anti-Vax Hashtags**
 - *#VaccinesKill, #SayNoToVaccines*

- ❖ *Generic Keywords*
 - *“covid vaccine”, “Vaxxer”*

- ❖ *Vaccine Names*
 - *“Pfizer”, “Moderna”*

** Provided by Gunaratne, Keith et.al. "Temporal trends in anti-vaccine discourse on Twitter"*

Data Collection - number of tweets collected

- | | |
|--|----------------------|
| 1. “Pre-COVID” period:
➤ <i>Jan 2018 - Dec 2019</i> | ➤ <i>2.9M Tweets</i> |
| 2. “COVID” period:
➤ <i>January-December 2020.</i> | ➤ <i>6.6M Tweets</i> |
| 3. “COVID-vax” period:
➤ <i>January-March 2021.</i> | ➤ <i>6.3M Tweets</i> |

Data Collection - number of tweets collected

Huge surge in vaccine-related tweets in 2021 (more on this later)

➤ Data collection

➤ Identifying vaccine-stance

➤ How the vaccine discourse has changed

➤ How users' vaccine-stance has changed

➤ Implications

Identifying vaccine-stance

- Developed 3-class classifiers
- First developed a classifier for individual tweets (Pro-vax, Neutral, Anti-vax)
- Next, used the tweet-classifier to identify vaccine-stance of Twitter users (Pro-vaxxer, Neutral, Anti-vaxxer) in different time periods

Developing a tweet-classifier: available datasets

<i>Dataset</i>	<i>Time Period</i>	<i>#tweets</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>	<i>Neutral</i>
<i>Muller</i> ¹	Before 2019	18.5k	10.5%	40.3%	49.3%
<i>Cotfas</i> ²	Nov-Dec 2020	2,792	25.3%	35.5%	36.2%

¹Müller, M. M., & Salathé, M. (2019). Crowdbreaks: tracking health trends using public social media data and crowdsourcing. *Frontiers in public health*.

²Cotfas, L. A. et.al. (2021). The Longest Month: Analyzing COVID-19 Vaccination Opinions Dynamics from Tweets in the Month following the First Vaccine Announcement. *IEEE Access*.

Data Annotation

- Wanted to construct a labeled dataset of tweets posted throughout the pandemic times
- A random sample of 1,700 tweets posted during Jan 2020 - Mar 2021
- Tweets labeled by 3 annotators on Prolific crowdsourcing platform
- Each tweet labelled into the 3 classes (Pro-vax, Neutral, Anti-vax)
 - 1,606 tweets with majority agreement
 - 785 tweets with unanimous agreement

All Datasets

<i>Dataset</i>	<i>Time Period</i>	<i>#tweets</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>	<i>Neutral</i>
<i>Muller</i>	Before 2019	18.5k	10.5%	40.3%	49.3%
<i>Cotfas</i>	Nov-Dec 2020	2,792	25.3%	35.5%	36.2%
<i>Cotfas + our data</i>	Jan 2020 - Mar 2021	3,577	26.0%	38.7%	35.3%

Tweet Classifiers

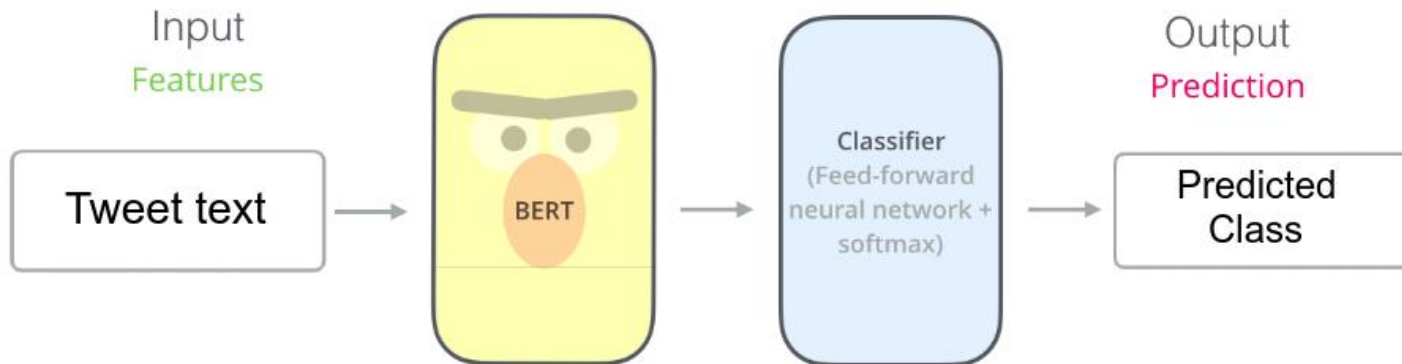

- SVM with TF-IDF features
 - Random Forest with TF-IDF features
 - Supervised FastText
- BERT-Base
 - BERT-Large
 - BERTweet
 - CT-BERT-v2*
(COVID-Twitter BERT)

**Müller, M. et.al. (2020). "Covid-twitter-bert: A natural language processing model to analyse covid-19 content on Twitter". arXiv preprint arXiv:2005.07503.*

Tweet Classifiers

- **CT-BERT++**
 - CT-BERT-v2 was first fine-tuned on the largest Muller dataset
 - This model further cross-validated on the datasets containing COVID-related tweets

Evaluation of Tweet Classifiers

- Stratified 5-fold cross validation on each dataset
- Average macro-F1 scores reported

	<i>Muller</i>	<i>Cotfas</i>	<i>Cotfas + our data</i>
SVM	0.628	0.751	0.695
FastText	0.650	0.735	0.683
Bert-Large	0.661	0.763	0.720
CT-BERT	0.687	0.768	0.797
CT-BERT++	-	0.858	0.825

Evaluation of Tweet Classifiers

- Stratified 5-fold cross validation on each dataset
- Average macro-F1 scores reported

	<i>Muller</i>	<i>Cotfas</i>	<i>Cotfas + our data</i>
<i>SVM</i>	0.628	0.751	0.695
<i>FastText</i>	0.650	0.735	0.683
<i>FastText + Large</i>	0.661	0.763	0.720
<i>CT-BERT</i>	0.687	0.768	0.797
<i>CT-BERT++</i>	-	0.858	0.825

Used to
classify
pre-COVID
tweets
(2018-19)

Evaluation of Tweet Classifiers

- Stratified 5-fold cross validation on each dataset
- Average macro-F1 scores reported

	<i>Muller</i>	<i>Cotfas</i>	<i>Cotfas + our data</i>
<i>SVM</i>	0.628	0.751	0.695
<i>FastText</i>	0.650	0.735	0.683
<i>FastText Large</i>	0.661	0.763	0.720
<i>CT-BERT</i>	0.687	0.768	0.797
<i>CT-BERT++</i>	-	0.858	0.825

Used to classify
pre-COVID
tweets
(2018-19)

Used to classify
tweets in COVID
times (2020-21)

User Classification method

- Identified the stance of a user **separately during each time period**
- A user is called **Anti-Vaxxer** during a particular time period if
 - The user posted at least **3 tweets** during this time period
 - **70%** of these tweets were **Anti-Vax** (*threshold selected based on a prior work**)
- Similarly **Pro-Vaxxers** were also identified.

*Mitra, T., Counts, S., & Pennebaker, J. W. "Understanding anti-vaccination attitudes in social media". ICWSM 2016.

Evaluation of the User Classification method

Annotators manually checked tweets and profiles of 300 users (100 from each time period) who were identified as Anti-vaxxers or Pro-vaxxers

<i>Time Period</i>	<i>Anti-Vaxxers (correct / checked)</i>	<i>Pro-Vaxxers (correct / checked)</i>
<i>Pre-COVID (2018-19)</i>	50 / 50	50 / 50
<i>COVID (2020)</i>	50 / 50	48 / 50
<i>COVID-Vax (Jan-Mar 2021)</i>	44 / 50	49 / 50
<i>Overall</i>	291 / 300	

Evaluation of the User Classification method

Annotators manually checked tweets and profiles of 300 users (100 from each time period) who were identified as Anti-vaxxers or Pro-vaxxers

Our methods classify the vaccine-stance of users with **97%** precision over all three time-periods

<i>COVID (2020)</i>	50 / 50	48 / 50
<i>COVID-Vax (Jan-Mar 2021)</i>	44 / 50	49 / 50
<i>Overall</i>	291 / 300	

➤ Data collection

➤ Identifying vaccine-stance

➤ **How the vaccine discourse has changed**

➤ How users' vaccine-stance has changed

➤ Implications

Classification results over all tweets

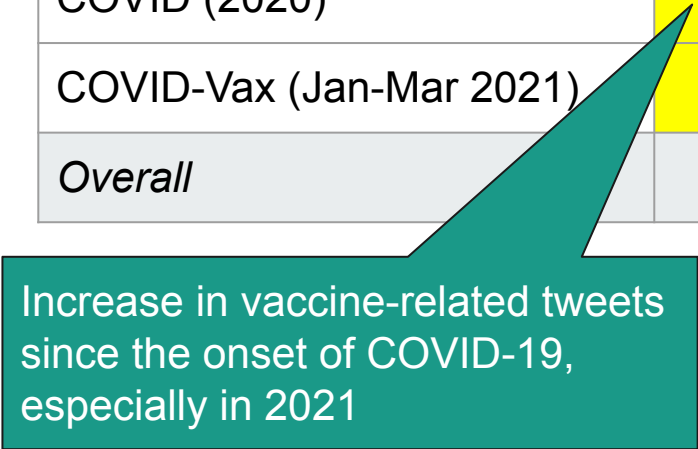

<i>Time Period</i>	<i>Total</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>
Pre-COVID (2018-19)	2.9M	577k	1.4M
COVID (2020)	6.6M	1.3M	1.8M
COVID-Vax (Jan-Mar 2021)	6.3M	1.1M	2.6M
<i>Overall</i>	<i>15.7M</i>	<i>3.0M</i>	<i>5.8M</i>

Classification results over all tweets

<i>Time Period</i>	<i>Total</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>
Pre-COVID (2018-19)	2.9M	577k	1.4M
COVID (2020)	6.6M	1.3M	1.8M
COVID-Vax (Jan-Mar 2021)	6.3M	1.1M	2.6M
<i>Overall</i>	<i>15.7M</i>	<i>3.0M</i>	<i>5.8M</i>

Increase in vaccine-related tweets since the onset of COVID-19, especially in 2021

Classification results over all tweets

<i>Time Period</i>	<i>Total</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>
Pre-COVID (2018-19)	2.9M	577k	1.4M
COVID (2020)	6.6M	1.3M	1.8M
COVID-Vax (Jan-Mar 2021)	6.2M	1.1M	2.6M
<i>Overall</i>	<i>15.7M</i>	<i>3.0M</i>	<i>5.8M</i>

Large increase in Anti-Vax tweets
since the onset of COVID-19

Classification results over all tweets

<i>Time Period</i>	<i>Total</i>	<i>Anti-Vax</i>	<i>Pro-Vax</i>
Pre-COVID (2018-19)	2.9M	577k	1.4M
COVID (2020)	6.6M	1.3M	1.8M
COVID-Vax (Jan-Mar 2021)	6.3M	1.1M	2.6M
<i>Overall</i>	<i>15.7M</i>	<i>3.0M</i>	<i>5.8M</i>

Increase in Pro-Vax tweets after vaccine distribution started.

Predicted user stances

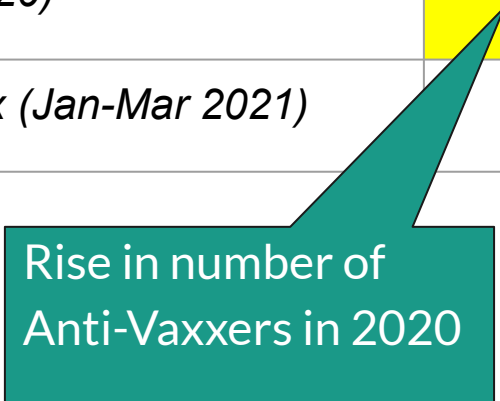

Time Period	Anti-Vaxxers	Pro-Vaxxers
<i>Pre-COVID (2018-19)</i>	14k	58k
<i>COVID (2020)</i>	47k	55k
<i>COVID-Vax (Jan-Mar 2021)</i>	37k	124k

Predicted user stances

Time Period	Anti-Vaxxers	Pro-Vaxxers
<i>Pre-COVID (2018-19)</i>	14k	58k
<i>COVID (2020)</i>	47k	55k
<i>COVID-Vax (Jan-Mar 2021)</i>	37k	124k

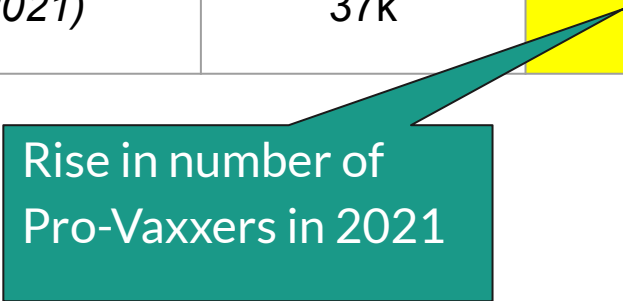

Rise in number of
Anti-Vaxxers in 2020

Predicted user stances

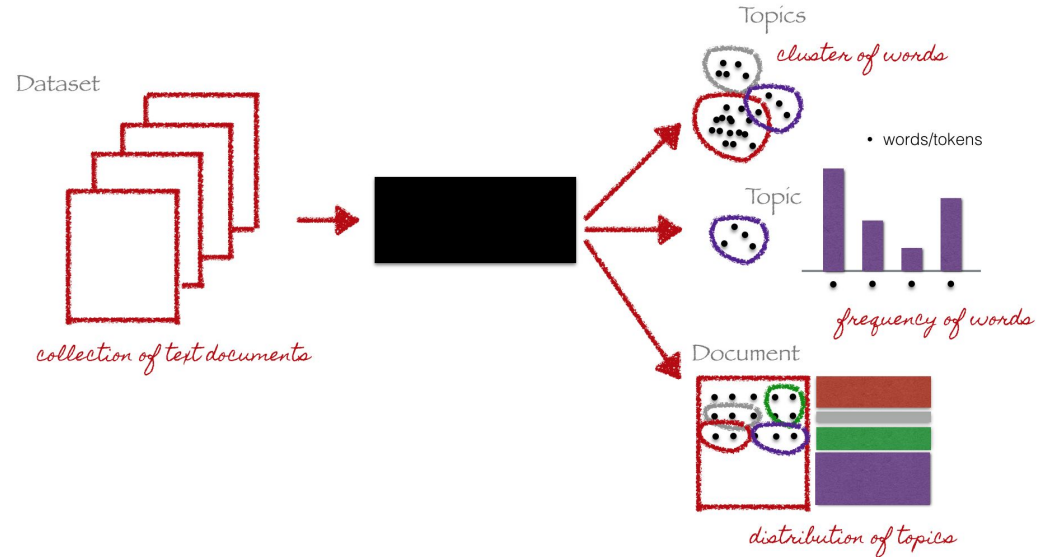

Time Period	Anti-Vaxxers	Pro-Vaxxers
<i>Pre-COVID (2018-19)</i>	14k	58k
<i>COVID (2020)</i>	47k	55k
<i>COVID-Vax (Jan-Mar 2021)</i>	37k	124k

Rise in number of
Pro-Vaxxers in 2021

Topic modeling over Anti-vax and Pro-vax tweets

- Used a combination of vanilla LDA, Labeled LDA and manual merging / splitting of topics
- 8 Anti-Vax themes from tweets posted by Anti-vaxxers
- 4 Pro-Vax themes from tweets posted by Pro-Vaxxers

Anti-Vax Themes

1. Health Concerns
 2. Against Mandatory
 3. Big Pharma
 4. Political
 5. Ineffective
 6. Rushed
 7. Shedding
 8. Deeper Conspiracy
- 

Anti-Vax Themes

1. **Health Concerns**
2. Against Mandatory
3. Big Pharma
4. Political
5. Ineffective
6. Rushed
7. Shedding
8. Deeper Conspiracy

Health Concerns

Concerns about the ingredients and side effects of vaccines, including deaths.

Sample tweet:

I won't take one derived from any aborted fetal tissues. AstraZeneca does come from a cell line from aborted fetal tissues. No way I'm taking that.

Anti-Vax Themes

1. Health Concerns
2. **Against Mandatory**
3. Big Pharma
4. Political
5. Ineffective
6. Rushed
7. Shedding
8. Deeper Conspiracy

Against Mandatory

Against mandatory vaccination – prefers freedom and choice.

Sample tweet:

Biden is going to do his best to get a mandatory Covid vaccine . I feel very bad for what's going to happen in America

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. **Big Pharma**
4. Political
5. Ineffective
6. Rushed
7. Shedding
8. Deeper Conspiracy

Big Pharma

Dissatisfied with the role of pharmaceutical companies – they are tricking people, trying to make money.

Sample tweet:

Big Pharma lines their pockets, doctors get bonuses for having 63% of their patients vaccinated

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. Big Pharma
4. **Political**
5. Ineffective
6. Rushed
7. Shedding
8. Deeper Conspiracy

Political

The vaccine is political in nature – Governments are promoting their own agenda.

Sample tweet:

the CDC is spewing govt scripted propaganda and lies daily

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. Big Pharma
4. Political
5. **Ineffective**
6. Rushed
7. Shedding
8. Deeper Conspiracy

Ineffective

Skeptical about the effectiveness of vaccines

Sample tweet:

I just read an article explaining that the first Covid-19 dose is only 52% effective.

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. Big Pharma
4. Political
5. Ineffective
6. **Rushed**
7. Shedding
8. Deeper Conspiracy

Rushed

Vaccine development is being rushed –
Not enough testing has been done

Sample tweet:

*What's the rush? Better to be safe than
sorry with the politically timed vaccine*

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. Big Pharma
4. Political
5. Ineffective
6. Rushed
7. **Shedding**
8. Deeper Conspiracy

Shedding

Virus Shedding – People who take vaccines will transmit the disease to others

Sample tweet:

we shouldn't be surprised if these new 'variant' strains are the vaccinated shedding the virus, or the virus mutating because of the vaccine.

Anti-Vax Themes

1. Health Concerns
2. Against Mandatory
3. Big Pharma
4. Political
5. Ineffective
6. Rushed
7. Shedding
8. **Deeper Conspiracy**

Deeper Conspiracy

Disease is a Hoax, Tracking Chips and talks of other conspiracies (other than just money making)

Sample tweet:

get to the end game implant us with tracking chips and drug us to become the brainwashed robots

Pro-Vax Themes

1. Want Vaccines
 2. Promote Vaccines
 3. Against Anti-Vaxxer
 4. Supports Authorities
- 

Pro-Vax Themes

1. **Want Vaccines**
2. Promote Vaccines
3. Against Anti-Vaxxer
4. Supports Authorities

Want Vaccines:

User wants to get vaccinated or has got the vaccine.

Sample tweet:

Yes, I will get the COVID-19 vaccine. (No, you cannot change my mind.)

Pro-Vax Themes

1. Want Vaccines
2. **Promote Vaccines**
3. Against Anti-Vaxxer
4. Supports Authorities

Promote Vaccines:

User is sharing positive emotions about vaccines.

Sample tweet:

Very good news on the Pfizer / BioNTech SE mRNA vaccine: early data shows 90% effectiveness!!

Pro-Vax Themes

1. Want Vaccines
2. Promote Vaccines
3. **Against Anti-Vaxxer**
4. Supports Authorities

Against Anti-Vaxxer:

Showing disagreement with Anti-Vaxxers

Sample tweet:

Anti-vaxx conspiracy bollocks preys on marginalized people living in news deserts. I heard a person wants to take ivermectin - not COVID vaccine.

Pro-Vax Themes

1. Want Vaccines
2. Promote Vaccines
3. Against Anti-Vaxxer
4. **Supports Authorities**

Supports Authorities:

Thanking or supporting medical staff or frontline workers for vaccines.

Sample tweet:

Thanks to funding and support from UNICEF, cold chain equipment, used to store vaccines

Variations in themes over time

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. <i>Big Pharma</i>	17.4%	13.3%	9.9%
2. <i>Health Concerns</i>	19.0%	15.1%	18.3%
3. <i>Political</i>	9.8%	12.2%	10.8%
4. <i>Against Mandatory</i>	17.6%	12.1%	13.0%
5. <i>Ineffective</i>	8.6%	13.8%	16.2%
6. <i>Rushed</i>	8.3%	12.3%	11.9%
7. <i>Shedding</i>	13.2%	9.6%	8.8%
8. <i>Deeper Conspiracy</i>	6.0%	11.6%	11.1%

Variations in themes over time

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. <i>Big Pharma</i>	17.4%	13.3%	9.9%
2. <i>Health Concerns</i>	19.0%	15.1%	18.3%
3. <i>Political</i>	9.8%	12.2%	10.8%
4. <i>Against Mandatory</i>	17.6%	12.1%	13.0%
5. <i>Ineffective</i>	8.6%	13.8%	16.2%
6. <i>Rushed</i>	8.3%	12.3%	11.9%
7. <i>Shedding</i>	13.2%	9.6%	8.8%
8. <i>Deeper Conspiracy</i>	6.0%	11.6%	11.1%

Health Concerns is the most common topic across all periods

Variations in themes

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. <i>Big Pharma</i>	17.4%	13.3%	9.9%
2. <i>Health Concerns</i>	19.0%	15.1%	18.3%
3. <i>Political</i>	9.8%	12.2%	10.8%
4. <i>Against Mandatory</i>	17.6%	12.1%	13.0%
5. <i>Ineffective</i>	8.6%	13.8%	16.2%
6. <i>Rushed</i>	8.3%	12.3%	11.9%
7. <i>Shedding</i>	13.2%	9.6%	8.8%
8. <i>Deeper Conspiracy</i>	6.0%	11.6%	11.1%

Most increased topics since the pandemic -- Rushed, Ineffective, and Deeper conspiracies

Variations in themes

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. <i>Big Pharma</i>	17.4%	13.3%	9.9%
2. <i>Health Concerns</i>	19.0%	15.1%	18.3%
3. <i>Political</i>	9.8%	12.2%	10.8%
4. <i>Against Mandatory</i>	17.6%	12.1%	13.0%
5. <i>Ineffective</i>	8.6%	13.8%	16.2%
6. <i>Rushed</i>	8.3%	12.3%	11.9%
7. <i>Shedding</i>	13.2%	9.6%	8.8%
8. <i>Deeper Conspiracy</i>	6.0%	11.6%	11.1%

Even more concerns about the ineffectiveness, especially in COVID-vax period

Variations in themes

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. Big Pharma	17.4%	13.3%	9.9%
2. Health Concerns	19.0%	15.1%	18.3%
3. Political	9.8%	12.2%	10.8%
4. Against Mandatory	17.6%	12.1%	13.0%
5. Ineffective	8.6%	13.8%	16.2%
6. Rushed	8.3%	12.3%	11.9%
7. Shedding	13.2%	9.6%	8.8%
8. Deeper Conspiracy	6.0%	11.6%	11.1%

Most reduced topics since the pandemic - Against Mandatory, Big Pharma

Variations in themes

	Pre-COVID (2018-19)	COVID (2020)	COVID-vax (2021)
1. <i>Big Pharma</i>	17.4%	13.3%	9.9%
2. <i>Health Concerns</i>	19.0%	15.1%	18.3%
3. <i>Political</i>	9.8%	12.2%	10.8%
4. <i>Against Mandatory</i>	17.6%	12.1%	13.0%
5. <i>Ineffective</i>	8.6%	13.8%	16.2%
6. <i>Rushed</i>	8.3%	12.3%	11.9%
7. <i>Shedding</i>	13.2%	9.6%	8.8%
8. <i>Deeper Conspiracy</i>	6.0%	11.6%	11.1%

Political reasons more prevalent in 2020 (triggered by the US elections)

-
- Data collection
 - Identifying vaccine-stance
 - How the vaccine discourse has changed
 - How users' vaccine-stance has changed
 - Implications

Recap: predicted user stances

Time Period	Anti-Vaxxers	Pro-Vaxxers
<i>Pre-COVID (2018-19)</i>	14k	58k
<i>COVID (2020)</i>	47k	55k
<i>COVID-Vax (Jan-Mar 2021)</i>	37k	124k

Did the stance of individual users evolve with time?

	Pre-COVID stance (2018-19)		
COVID Stance (2020)		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	2791	218
	<i>Pro-Vax</i>	21	6853

	COVID stance (2020)		
COVID-vax Stance (2021)		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	7855	121
	<i>Pro-Vax</i>	329	9898

Did the stance of individual users evolve with time?

COVID Stance (2020)	Pre-COVID stance (2018-19)		
		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	2791	218
	<i>Pro-Vax</i>	21	6853

COVID-vax Stance (2021)	COVID stance (2020)		
		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	7855	121
	<i>Pro-Vax</i>	329	9898

Most users continue to follow the same stance towards vaccines

Stance-changed users

COVID Stance (2020)	Pre-COVID stance (2018-19)		
		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	2791	218
	<i>Pro-Vax</i>	21	6853

COVID-vax Stance (2021)	COVID stance (2020)		
		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	7855	121
	<i>Pro-Vax</i>	329	9898

We find 675 users who have changed their stance towards vaccines

Stance-changed users

	Pre-COVID stance (2018-19)		
COVID Stance (2020)		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	2791	218
	<i>Pro-Vax</i>	21	6853

	COVID stance (2020)		
COVID-vax Stance (2021)		<i>Anti-Vax</i>	<i>Pro-Vax</i>
	<i>Anti-Vax</i>	7855	121
	<i>Pro-Vax</i>	329	9898

14 users who changed their stance multiple times (Pro → Anti → Pro)

Example tweets from stance-changed Users

	Pro-Vaxxer in pre-COVID period (2018-19), Anti-Vaxxer in COVID period (2020)	
U1	<i>Every child should be vaccinated. I don't understand why parents wouldn't. Sad ... endangering others</i>	<i>Honestly this administration caused so much sickness and death, I will not trust a vaccine. #LyingTrump</i>
	Anti-Vaxxer in COVID period (2020), Pro-Vaxxer in COVID-vax period (2021)	
U2	<i>I'm not paying Big Pharma for a vaccine against something that they invented in order to sell vaccines.</i>	<i>I've had the first shot of the Pfizer vaccine. I'm a school bus driver. I'm in contact with kids daily and several times</i>

A few checks on the stance-changed users

- Are they automated bots?
 - Checked using Botometer v2, followed by manual observation
 - Only 1 both account found; removed from further analyses
- Is the observed stance-change an artefact of a user supporting vaccine X at one point of time and opposing vaccine Y at some other time?
 - Found only 13 such users (2% of 674)
 - All these users expressed support in general for vaccines at some point, and opposed vaccines in general at some other point

Are stance-changed users representative of the general active Twitter population?

Compared stance-changed users with the general active Twitter population talking about vaccines

Both groups are very similar in terms of network properties (#followings & #followers).

Stance-changed users post more Anti-Vax and Pro-Vax opinions than others.

Why the stance change?

Investigated potential reasons for stance change of users

- Life-changing events
- Effect of social connections

Users who had life changing events

U1	Thank you, @USER. You know your son. Seizures followed vaccination. Vaccine safety has not been proven. Cases like yours demand further investigation.	My husband died after becoming ill with corona virus. I am glad a vaccine has been developed in record time. I intend to be vaccinated as soon as possible
U2	Having an autistic child destroyed my family. I took my healthy baby to the doctor that gave the vaccine that caused it.	My husband and I both are frontline healthcare workers and we both are getting vaccinated Thursday. Yeah, we are nervous, but the daily stress of walking into a room with a covid patient is worse.

Effect of social connections

- Is the stance change of a user influenced by the stance of his/her social connections (followings) at various points of time?

Computing change in stance of followings

- Not possible to get the followings of a user at different points of time in history
- Hence for a user u :
 1. What fraction of u 's current followings were Pro-Vaxxers and Anti-Vaxxers (by our classifier) during each time period (2018-19, 2020 and 2021)
 2. Calculate the **change** in the Pro-Vaxxer and Anti-Vaxxer followings of u during two consecutive time periods (from 2018-19 to 2020, and from 2020 to 2021)
- Average the changes in followings across all users u in a subgroup of stance-changed users (e.g., who changed from Anti in 2020 to Pro in 2021)

Change in stance of followings

5 subgroups of stance-changed users	2018-19 to 2020		2020 to 2021	
	<i>Pro</i>	<i>Anti</i>	<i>Pro</i>	<i>Anti</i>
<i>Anti (2018-19) to Pro (2020)</i>	1.06x	1.94x	1.45x	0.70x
<i>Pro (2018-19) to Anti (2020)</i>	1.04x	4.43x	1.67x	0.85x
<i>Anti (2020) to Pro (2021)</i>	1.34x	4.38x	2.25x	0.70x
<i>Pro (2020) to Anti (2021)</i>	1.38x	5.89x	1.49x	1.25x
<i>Pro (2018-19) to Anti (2020) to Pro (2021)</i>	0.72x	1.94x	2.17x	0.35x

Change in stance of followings

5 subgroups of stance-changed users	2018-19 to 2020		2020 to 2021	
	<i>Pro</i>	<i>Anti</i>	<i>Pro</i>	<i>Anti</i>
<i>Anti (2018-19) to Pro (2020)</i>	1.06x	1.94x	1.45x	0.70x
<i>Pro (2018-19) to Anti (2020)</i>	1.04x	4.43x	1.67x	0.85x
<i>Anti (2020) to Pro (2020)</i>	1.34x	4.38x	1.5x	0.70x
	1.38x	5.89x		1.25x
	0.72x	1.94x		

For this group of users, the #Pro-Vax followings increased from 2018-19 to 2020 by 1.06 times (on average, across all users in this group)

For this group of users, the #Anti-Vax followings increased from 2018-19 to 2020 by 1.94 times (on average, across all users in this group)

Change in stance of followings

	<i>2018-19 to 2020</i>		<i>2020 to 2021</i>	
	<i>Pro</i>	<i>Anti</i>	<i>Pro</i>	<i>Anti</i>
<i>Anti (2018-19) to Pro (2020)</i>	1.06x	1.94x	1.45x	0.70x
<i>Pro (2018-19) to Anti (2020)</i>	1.04x	4.43x	1.67x	0.85x
<i>Anti (2020) to Pro (2021)</i>	1.34x	4.38x	2.25x	0.70x
<i>Pro (2020) to Anti (2021)</i>	1.38x	5.89x	1.49x	1.25x
<i>Pro (2018-19) to Anti (2020) to Pro (2021)</i>	0.72x	1.94x	2.17x	0.35x

Even though overall #Anti-Vaxxers increased in 2020, the change was much more in the neighbourhood of those who turned Anti-Vaxxers in 2020

Change in stance of followings

	<i>2018-19 to 2020</i>		<i>2020 to 2021</i>	
	<i>Pro</i>	<i>Anti</i>	<i>Pro</i>	<i>Anti</i>
<i>Anti (2018-19) to Pro (2020)</i>	1.06x	1.94x	1.45x	0.70x
<i>Pro (2018-19) to Anti (2020)</i>	1.04x	4.43x	1.67x	0.85x
<i>Anti (2020) to Pro (2021)</i>	1.34x	4.38x	2.25x	0.70x
<i>Pro (2020) to Anti (2021)</i>	1.38x	5.89x	1.49x	1.25x
<i>Pro (2018-19) to Anti (2020) to Pro (2021)</i>	0.72x	1.94x	2.17x	0.35x

Even though overall #Pro-Vaxxers increased in 2021, the change was much more in the neighbourhood of those who turned Pro-Vaxxers in 2021

Change in stance of followings

	<i>2018-19 to 2020</i>		<i>2020 to 2021</i>	
	<i>Pro</i>	<i>Anti</i>	<i>Pro</i>	<i>Anti</i>
<i>Anti (2018-19) to Pro (2020)</i>	1.06x	1.94x	1.45x	0.70x
<i>Pro (2018-19) to Anti (2020)</i>	1.04x	4.43x	1.67x	0.85x
<i>Anti (2020) to Pro (2021)</i>	1.34x	4.38x	2.25x	0.70x
<i>Pro (2020) to Anti (2021)</i>	1.38x	5.89x	1.49x	1.25x
<i>Pro (2018-19) to Anti (2020) to Pro (2021)</i>	0.72x	1.94x	2.17x	0.35x

For the users who changed stance twice, the #Anti-Vax followings increased more than #Pro-Vax followings in 2020, and vice versa in 2021.

Users seem to have different reasons for changing vaccine-stance, including life-changing events and influence of their social contacts.

-
- Data collection
 - Identifying vaccine-stance
 - How the vaccine discourse has changed
 - How users' vaccine-stance has changed
 - Implications

Summary

- A method to infer the vaccine-stance of Twitter users with 97% precision
- How a global event (the COVID-19 pandemic) has changed
 - The vaccine-related discourse on Twitter
 - The vaccine-stances/opinions of people
- Stance-change of a user influenced by factors such as major events in his/her life (e.g., death of a close relative) or changes in his/her social neighborhood

Implications for policy-makers

- Devising targeted approaches to address people's vaccine-related concerns
- Identifying people who have changed their stances - can serve as ambassadors for convincing others
- Utilizing social media for nudging people towards vaccination

Implications for policy-makers

- Devising targeted approaches to address people's vaccine-related concerns
- Identifying people who have changed their stances - can serve as ambassadors for convincing others
- Utilizing social media for nudging people towards vaccination
